

SuperSafetysm Track Course

“The Sequence” All courses are designed to teach what I call “The Sequence”. It is what the top drivers in the nation are doing. What is the perfect line; proper hand positions; correct eye targeting; entry speed; and carrying maximum speed through the corner and into the exit. The four types of braking, and what each one involves is taught. The types and causes of slides and how to recover from each is taught. Our driver awareness plan lets you know, how to find the limit of the vehicle without going beyond and crashing. Emergency procedures that can minimize damage and injury are emphasized. It is all part of **“The Sequence.”**

We compare what you are doing with proper technique, and make the changes bit by bit. Once a good foundation is built, we turn up the intensity and advance towards the limits of the vehicle. Whether it is a short course or multi-day course leading to a competition license, this step-by-step progression toward correct techniques instills confidence and consistency in driver skills to avoid accidents - the objective of **SuperSafety**.

Half Day, One Day, and Two Day Courses

In the time you will give us, we will take you step by step as close as possible to mastering "The Sequence." Whether your goal is to get from point A to point B with more confidence on the street or to becoming a championship winning racer on the track; we can help you learn the techniques to achieve your goals.

Michael Pettiford, President of GO 4 IT Services Inc., holds SCCA and AMA Pro Road Racing Competition licenses. Michael has won 22 Rocky Mountain Division National Championships, and is the first driver in SCCA history to win 3 Championships in the same year. He is a regular competitor on the road racing circuit. His expertise in high performance driving instruction and safety education guarantee a positive and safe learning environment for his students.
